```

Assignment Description:

The purpose of the Mad Libs assignment is to expand my knowledge of JavaScript and HTML through practice of basic skills, also to learn new skills with functions and how to use variables to achieve your goal. This also teaches us how to go through and examine errors in your code and then Debug it if necessary. What I did was make a function that calls two other functions with the madlibs code, you can call the function you want by taking the input of the user, their input is key to making the code work. With this I achieved a function that effectively uses the input of the user and calls the correct Mad Lib they asked for.

Reason for including this Document in My Portfolio

What is significant about this assignment/certification? It combines my skills in JavaScript and HTML, in addition to that it shows interaction with projects and shows continuous improvement. How will this assignment/certification help to prove my skills to my employer? It shows I can fully complete a project, shows my Willingness to add on to the project, and shows me willing to look for problems (Debug). What will I do to continue to build on or maintain these skills? I will Develop new projects, Research the relevant topics, Practice new concepts, and Take additional classes.
